Attachment B

Document any Infection Control Precautions

Patient Movement Progress Notes/ Considerations for AE Transport

Vitals & Sats

- ❑ Most recent vital signs
- ❑ Intake/Output totals
- ❑ Vitals and temp in normal limits
- ❑ Risks for hypoxia en-route – O2 for ground, ventilator, suction
- ❑ Pain Assessment and adequate amount of meds
- ❑ Controlled Drug Accountability

GI/Bowel & Bladder

- ❑ Bowel/Bladder toileting documented
- ❑ Urinary Catheter in place
- ❑ Colostomy/ileostomy/urinary drainage bag clean/empty

IV Maintenance

- ❑ IV tubing changed within 48 hours of transport
- ❑ IV Catheter changed within 48 hours of transport and patent
- ❑ IVs labeled/timed/pump

Neuro

- ❑ Risks for DVT
- ❑ Adequate circulation/neuro status of all extremities

Ortho

- ❑ External fixator pin care
- ❑ Plaster casts should be 48 hours old and bivalved

Skin and Wound Care

- ❑ Dressing clean/dry/negative pressure device
- ❑ Dressing changed within 12 hours of transport
- ❑ Risk for skin breakdown (turn every two hours)

NOTE: Hospitals moving patients out-of-state through MIEP should include details specific to checked items above in the ARR "**History**" field for corresponding patients.
